

BTK-250

Consistency Meter

for concrete, mortar and anhydrite screed

The technology of ready-mixed concrete is becoming more and more important in the building sector. Ready-mixed concrete of high quality is more and more in demand. The increasingly utilized self-compacting concrete requires an equally rational quality control like ready-mixed concrete and mortar. Therefore, we have substantially improved the quality of our consistency measurement devices during the last years.

The BTK-250 is a compact and easy to use device for the fast and exact examination of the ready-mixed concrete directly in the mixer. The BTK-250 allows a reliable control of the concrete quality. The spreading serves as quality parameter.

Characteristics of the BTK-250:

- Measuring with continuous action
- Measures the effective power of the mixer motor and calculates the spreading / slump
- Clear LED display and analogue visualization
- Displays the consistency KS, KP, KR, KF or F1, F2, F3, F4, F5, F6
- Displays the spreading of concrete from 33 to 75 centimetres
- Power supply 230 V AC 50/60 Hz or 115V AC 60 Hz
